Password:
No WiFi option specified on command line, so checking for 802.11ac...
Found 802.11ac WiFi card, so not installing a WiFi patch.
No patch mode specified on command line. Detecting Mac model...
(Use --2019, --2021, or --2012 command line option to override.)
Detected model: MacBookPro8,3
Detected a 2011 Mac. Using --2011 patch mode. MacBookPro8,3
Installing kexts to:
/

Volume appears to have a Big Sur installation (build 20091). Continuing.
Volume is mounted from device: /dev/disk1s5s1
Mounted device is a snapshot. Will now mount underlying volume
From device /dev/disk1s5 at temporary mountpoint:
/System/Volumes/Update/mnt1

Checking for KernelCollections backup...
Backup not found. Performing backup now. This may take a few minutes.
Backing up original KernelCollections to:
/System/Volumes/Update/mnt1/System/Library/KernelCollections/KernelCollections-20091.tar.lz4
a BootKernelExtensions.kc
a SystemKernelExtensions.kc
Installing High Sierra AppleHDA.kext
Installing High Sierra Intel HD 3000 kexts
Installing LegacyUSBInjector.kext
Installing Catalina AppleBMC9151ethernet.kext
patching IOBluetooth.framework for Continuity and HandOff for board-id Mac-942459F5819B1718
Continuity for Mac-942459F5819B1718 set to: true
your system with board-id Mac-942459F5819B1718 has no black list entry
and will possibly support Continuity and HandOff out of the box.
Disable Library Validation
Installing patched CoreBrightness.framework for Night Shift
Using kmuttl to rebuild boot collection...
Using kmuttl to rebuild system collection...
Error occurred while building a collection:
1: One or more binaries has an error which prevented linking. See other errors.
2: Could not use 'com.apple.kext.AMDRadeonX3800' because: Cannot find symbol for metaclass pointed to by '___ZN37AMDRadeonX3800_AMDAccelDisplayMachine10superClassE'. Expected symbol '___ZN22IOAccelDisplayMachine21@MetaClassE' to be defined in another kext
com.apple.kext.AMDRadeonX3800 specific:
1: Cannot find symbol for metaclass pointed to by '___ZN37AMDRadeonX3800_AMDAccelDisplayMachine10superClassE'. Expected symbol '___ZN22IOAccelDisplayMachine21@MetaClassE' to be defined in another kext

kmuttl failed. See above output for more information.
patch-kexts.sh cannot continue.
